

Alphabioregen

Product Name: CMRL-1066 w/o L-Glutamine,

Catalog No: PG016

Product Format: Liquid

Stored at 4°C

General Information: CMRL-1066 is a chemically defined medium developed in the late 1960's at the Connaugh Medical Research Laboratories. CMRL-1066 was designed initially for use with mouse L-cells in non-supplemented culture. Although developed for use in serum-free culture, CMRL-1066 can be supplemented with serum and used to support the growth of many cell types. Suitable for growing a wide variety of cell types, especially fibroblast-like cells.

The medium is for research use only and not approved for human or animal use or for application in any in vitro diagnostic procedure. Storage of the medium and supplements Please note that the basal medium has to be stored at 4°C up to 8°C but never should be frozen. The supplement has to be stored at -20°C. Protect from light for a longer time period.

Preparing and Stability:

Thaw the supplement mixture at 37°C before adding to the basal medium. After thawing please rinse the bottle and the tube with 70% ethanol as protection. Remove ethanol excess before opening the cap of the tube. After adding the supplement mixture to the basal medium slew carefully to get a homogenous medium. Please be careful not to touch the tube or bottle interior threads with your fingers. Please avoid long term exposure to light because some components are light sensitive. Also do not warm up the medium over 37°C. All this protects your medium against contamination or degradation of essential components.
